B.S, department of physics, [Fu Jen Catholic University](#) 2009 - 2013

## WORK EXPERIENCE

Sr. backend software Engineer, [Lenovo](#), Taipei July 2022 – March 2024

Python/Django/Flask/JavaScript/Vue.js/MySQL/Redis/Nginx/Docker

- Maintained and developed a SaaS website for server hardware testing as a service (Share Tool).
  - Use Flask and Vue.js to build this service.
  - Resolve the issues and new features raised by Lenovo's internal hardware engineers for this project.
- Implemented statistics from the external Lenovo material API.
  - Notified engineers of daily material changes.
  - Enhanced daily work efficiency by 3% through the reduction of manual calculations.
  - Display highly readable data messages in emails using HTML and CSS.
- Implemented NPS statistics for engineers' work orders.
  - Completed the statistical calculation of NPS charts.
  - Based the calculations on scoring feedback from engineers' work orders.
  - Enhanced NPS calculation efficiency by 10% and made the results available for managerial statistical use.

Sr. backend software Engineer, [Hipposcreen](#), Taipei July 2020 – July 2022

Python/Django/Django REST framework/JavaScript/PostgreSQL/Celery/Redis/Nginx/Docker/Azure

- Implemented API service and manager website system independently.
  - Use Django REST framework to build REST API service.
  - Use Docker compose to deploy service on Azure VM with HTTPS URL.
  - It can generate inspection PDF reports by weasyprint.
- Implemented company official website independently.
  - Its messaging system combined with Teams API saves marketers and visitors conversation time.
  - Marketers can use the Django admin page to manage contents.
  - Optimize Google SEO so that the company name is the first in the search order.
- Implemented on duty ERP system to improve 2% company operation process.
  - It has a friendly page to show who is on duty today, and send notification in Teams.
  - Combine with the government holiday API to check which date is workday.

Backend software Engineer, [Croxlink](#), Taipei December 2017 – June 2020

- Implemented supply chain management website independently (Python, Django, JavaScript, Celery, PostgreSQL, Redis, AWS).

Full-Stack software Engineer, [Cloudcube](#), Taipei August 2015 – May 2017

- Implemented customized [OpenStack](#) portal to simulate the [Horizon](#) project (Python, Django, Flask, JavaScript, HTML, CSS).

## SIDE PROJECTS

- [Software job note](#): I share front-end and interview tips for beginners, gaining over 500 stars on Github, and rank second in Google search SEO for the keyword '軟體工作入門' (software job entry).
- [E-commerce website](#): An e-commerce website for selling toys, implemented with *Django* and deployed online.
- [Portfolio website](#): My portfolio website showcases my coding skills, built with *React* and deployed on GitHub Pages.
- [python-docs-zh-tw](#): Contributed to open source with 118N [pull request](#) for Python documentation.
- [Technical blog](#): A blog sharing technical insights about software work.
- Stackoverflow answer: [Answer question](#) about *Django* pagination on Stackoverflow .
